

Opti Swine Coccidiosis Multi-qPCR Kit™

Cat no. SWPM-003

- Delivers results within 1 hour of DNA preparation
- Store at -20°C

● I. suis
● Eimeria spp.

■ Swine Coccidiosis

- A disease characterized by diarrhea in suckling and recently weaned pigs.
- The disease is usually caused by **Isospora suis** but occasionally by other **Eimeria spp.**
- The impact of the disease is mainly related to the slow growth of the infected piglets and poor quality of the piglets at weaning.
- The symptoms of coccidiosis in pigs are similar to those of the bacterial infection E. coli.
